

note:

- Consider space allowance for the installation of gas, electrical and network fittings - refer to **Sec. G** of the Escea DF Series Install Manual for more information.
- A **50mm** min gap should be maintained between the top of any roof flashing and the base of the EVP cowl unit - this will allow fixing of the rigid liner to the EVP cowl unit without restriction.
- The DFS730 freestanding unit must be installed correctly before installing the DF700 chassis.
- Flue clearance for DFS730 is provided by the location of the flue in the painted rigid liner

IMPORTANT:
 This technical sheet must be read in conjunction with the Escea DF Series Installation Manual, the latest version can be found on our website www.escea.com/nz/technical/

Contact the ESCEA Architectural Advisory Team for assistance with installation of this fire - aa@escea.com
