- The **Internal Vertical Powerflue** is suitable for installations where the flue fan will be located in a roof space, but still remain accessible for servicing.
- It is advisable to secure the flexible flue to prevent movement, vibration and sagging - this will also assist in maintaining the required 50mm standoff where required.
- Construction requirements including venting, moisture control and insulation shown for illustrative purposes only. Confirm specific regulatory requirements.
- The flue terminal will get very hot when in use. Precautions should be taken to protect people and animals from injury.
- This technical sheet must be read in conjunction with the relevant Escea Gas Fireplace Installation Manual, the latest version can be found on our website at [www.escea.com](http://www.escea.com).
